

The Volkswagen (VW) Mitigation Program is a result of the settlement reached between VW Group of America and certain related entities, collectively known as Volkswagen or VW, and federal authorities. In this settlement, VW admitted to violating the Clean Air Act from 2009 through 2016 by selling nearly 590,000 vehicles equipped with diesel engines that utilized software designed to cheat on emissions tests, thereby emitting higher levels of nitrogen oxide (NOx) than reported during certification. To address this violation, VW agreed to pay over \$2.9 billion into an Environmental Mitigation Trust Fund administered by Wilmington Trust, N.A., which is intended to support environmental programs for a decade to offset the excess NOx emitted by these vehicles.

The State of Wisconsin received approximately \$67.1 million from this fund and has developed a Beneficiary Mitigation Plan to utilize these funds effectively. The plan aims at projects that reduce NOx emissions, including investments in electric vehicle (EV) charging infrastructure like Park & Plug chargers along major travel routes in Florida.

For more detailed information on the VW Mitigation Program, you can refer to the official documents and plans available from relevant government agencies such as the Connecticut Department of Energy and Environmental Protection or similar state-level environmental protection departments.
