

The VW Mitigation Program is detailed in a PDF document that outlines how funds from the Environmental Mitigation Trust will be used to offset excess nitrogen oxide (NOx) emissions caused by Volkswagen vehicles equipped with illegal defeat devices. The program includes provisions for funding projects aimed at reducing NOx emissions, such as electric vehicle charging infrastructure and other clean air initiatives. In Connecticut specifically, the Department of Energy and Environmental Protection has developed a Beneficiary Mitigation Plan to utilize these funds effectively. This plan is designed to be flexible and adaptable to new technologies while ensuring cost-effective reductions in harmful emissions.
